

The Department of Mathematical Sciences at DePaul University invites applications for a tenure track position in statistics at the rank of Assistant Professor/Associate Professor beginning September 2016.

With an enrollment of over 23,000 students, DePaul is the nation's twelfth largest private non-profit university. In addition to offering a broad array of mathematics and statistics courses at the undergraduate level, the department offers graduate programs leading to Masters Degrees in Applied Statistics and Applied Mathematics with concentrations in Actuarial Science or in Statistics.

The department seeks candidates actively engaged in research and strongly committed to teaching. To be considered, candidates must have a Ph.D. in statistics, or alternatively a doctoral degree in a closely related field with significant coursework in statistics at the time of appointment. While all areas of statistics will be considered, preference will be given to candidates having expertise in Bayesian inference, longitudinal data analysis, time series, and experimental design.

In addition to the above requirements, consideration for appointment at the Associate Professor level requires evidence of excellence in both research and teaching commensurate with the University expectations for faculty at that rank. Applications must be submitted electronically to [mathjobs.org](http://mathjobs.org) and <http://facultyopportunities.depaul.edu/postings/283> and should include a curriculum vita, transcripts, a letter describing the applicant's teaching and research interests, and three letters of recommendation, at least one of which addresses the applicant's teaching effectiveness. Applicants are also encouraged to supply additional information such as formal teaching evaluation summaries. Review of applications will begin on December 1, 2015 and continue until the position is filled. Applications received by this date will receive full consideration.

To be considered, candidates must have a Ph.D. in statistics, or alternatively a doctoral degree in a closely related field with significant coursework in statistics at the time of appointment.
